SKILLS

React, Redux, Flask, Python, Javascript, HTML, CSS, SQL, Node.js, Express

PROJECTS

CoverMe (Python, Flask, Websockets, React, Redux, Javascript, SQLAlchemy)

[live](#) | [github](#)

An app made for employees to be able to cover and request coverage for a shift.

- Integrated WebSockets and auth routes, allowing users to send messages in real-time while restricting access to unsolicited messages to ensure message group privacy.
- Developed a custom algorithm using conditionals to accurately organize each day in every month, without relying on pre-existing packages or components to display an accurate calendar for the user to create and view calendar events.
- Engineered custom APIs with Python and SQLAlchemy to orchestrate the request and response cycle of the application resulting in seamless information transfers for users.

Farm To Table (Python, Flask, React, Redux, Javascript, SQL)

[live](#) | [github](#)

A commerce web app where users can order different produce straight from the farmers

- Implemented React for robust state management to efficiently handle and update application states regarding each user's shopping cart resulting in an optimized and responsive user interface.
- Applied Auth Routes to restrict user access, ensuring that each user can only view and interact with their designated carts.
- Utilized Git feature branching to effectively manage collaborative work within the team to guarantee a conflict-free final product.

Airbnb (Javascript, ReactJS, Express, SQL)

[live](#) | [github](#)

Airbnb clone where users can view and book places to stay.

- Coordinated scheduling and booking operations through efficient CRUD processes utilizing SQLite3, ensuring streamlined organization and accessibility of data.
- Executed data fetching and API integration with React.js to optimize user interactions, establishing robust communication channels between the front-end and back-end for a more dynamic and responsive web application.
- Employed CSS to develop custom style sheets, meticulously replicating the design elements of the official Airbnb site in order to implement a pixel perfect approach.

EXPERIENCE

IT Manager

Sherman Oaks Veterinary Group

Nov 2021 - Present

- Explore and expand on the uses of our current software to fit the needs of the business
- Set up any new software or device and explain the usages
- Maintain all electronics in the hospital including computers, tablets, and lab machines
- Create new applications based on areas where the company is lacking in order to increase efficiency
